

The ITMA Munich ? A very positive exhibition for Havertex

<<For us ITMA has been a very positive exhibition, with sales that greatly exceeded expectation, and with really significant "target visits". This is how Simone Balconi, owner of Havertex Srl comments in taking stock of the fair outcome. The company is a leader in the field of circular knitting machine building.

<<We had the confirmation that the knitting market is continuing to expand and, after this ITMA edition, even more than in the past. For sure, the mere presence on the market is not sufficient, what is essential is to have the right machines, those which thanks to their innovation and possibilities of use afford the best solutions. But for Havertex this is not a problem, thanks to the ongoing development that hallmarks our production>>.

Machines such as the "BSM 2100 Open", displayed at ITMA 2007, enables to carry out, with very fine count yarns, processings hitherto never seen in the knitting machine sector. Or also the high-speed closed jersey machine, that in Munich has amazed everybody because of its very high rotation speed.

Havertex is a young and continuously growing company, which today sells on the most dissimilar markets, in Europa as well as in North Africa. <<We have taken root in most European countries>>, Balconi explains, <<in the whole South America and, in the coming months, we'll also strike out into the Far East: a tough market, where however we are convinced we can do our part>>.
